

Flex

High-elastic crosslinking monomers.

Fuse

Modified filler-surface treatment.

TOP CEMENT AWARD 7 TIMES IN A ROW!

GC FujiCEM® 2
Resin Modified Glass Ionomer Cement

Over 17 Million Restorations*

- Latest generation of resin-modified glass ionomer cement
- Excellent handling, consistency and bond strength
- Easy clean-up and one-step application, saving chair time
- Ideal for cementation of zirconia, PFM and lithium disilicate restorations
- High fluoride release
- Moisture tolerant, no isolation required

*Based on units sold.

Strong Retention

Optimal chemical balance for maximum adhesion to tooth structure. The high compressive and flexural strength provides the best possible support for your indirect restorations. When increased retention is required for zirconia prosthetics, use a ceramic primer such as GC CERAMIC PRIMER II and follow manufacturer's instructions.

Sealing Ability and Marginal Integrity

Excellent chemical bonding to tooth structure maintains the marginal seal, minimizing the risk of microleakage and secondary caries.

Sustained Fluoride Release

Utilizes glass ionomer technology for a sustained release of desirable fluoride.

Virtually No Post-Operative Sensitivity

Poses virtually no risk of post-op sensitivity for patients because it is non-irritating to tooth structure and surrounding soft tissue.

<p>Moisture Tolerant</p>  <p>GC FujiCEM® 2 rules out the need of rubber dam or extra care to control humidity.</p>	<p>Self-Adhesive</p>  <p>No need for previous etching and bonding in different steps.</p>
<p>Ideal Consistency</p>  <p>The mixed paste is not runny, yet allows for a perfect flow under seating pressure.</p>	<p>Extremely Low Film Thickness</p>  <p>It flows perfectly under seating pressure to create an incredibly thin film thickness.</p>
<p>Easy Clean-Up</p>  <p>One minute after luting, the cement reaches a rubbery consistency for non-messy removal of excess material.</p>	<p>Long-Lasting Restoration</p>  <p>Virtually no post-operative sensitivity, durable adhesion and sustained fluoride release against secondary caries.</p>

Extremely Low Film Thickness

The creamy consistency and low film thickness allows for stress-free seating of restorations.

Differentiated Color of Paste A and B

This enhanced feature gives you visual control to achieve a homogenic mix.

441001 (US) / 451001 (Canada) **GC FujiCEM® 2 Starter Kit**
Contains: One (7.2 mL; 13.3 g) cartridge, 20 mixing tips and one GC FujiCEM® 2 Dispenser.

441000 (US) / 451000 (Canada) **GC FujiCEM® 2 Automix Package**
Contains: Two (7.2 mL; 13.3 g) cartridges and 42 mixing tips.

441002 (US) / 451002 (Canada) **GC FujiCEM® 2 Refill**
Contains: Two (7.2 mL; 13.3 g) cartridges and a #22 Mixing Pad.

431578 **GC FujiCEM® 2 Mixing Tips SL**
Contains: 20 mixing tips.

431577 **GC FujiCEM® 2 Mixing Tips Intraoral Tip SL**
Contains: 10 mixing tips.

004647 **GC FujiCEM® 2 Dispenser**
Contains: One dispenser
