

GC Tooth Mousse GC Tooth Mousse Plus

Strengthens. Protects. Desensitises

GC Tooth Mousse is a delicious tasting creme that is beneficial for teeth. It contains calcium and phosphate, the major minerals teeth are made up. These minerals are carried in a special milk-derived protein known as RECALDENT™ (CPP-ACP).

GC Tooth Mousse helps protect the teeth aiding the replacement of calcium and phosphate minerals lost during regular acid attack after eating and drinking.

Available in 5 different flavors:
Strawberry, Vanilla, Melon, Mint and Tutti Frutti

GC Tooth Mousse Plus contains RECALDENT™ but with additional Fluoride (CPP-ACPF). The role of fluoride in strengthening and protecting teeth has long been understood. Controlled fluoride uptake into teeth helps to promote a stronger and more acid resistant tooth structure.

The level of fluoride in Tooth Mousse Plus is 0.2% or 900ppm a level just below that found in normal adult toothpastes (1000ppm). This provides greater anti-carries protection to the teeth.

Available in 3 different flavors:
Strawberry, Vanilla and Mint

GC Tooth Mousse Plus contains 10% RECALDENT™ (CPP-ACP) and 900ppm fluoride in a formulation designed to deliver CPP-ACPF (casein phosphopeptide amorphous calcium phosphate fluoride) to the tooth surface

Tooth Mousse Plus is recommended for patients above 6 years old.

Both Tooth Mousse and Tooth Mousse Plus should not be used by anyone with milk protein allergies or sensitivity to benzoate preservatives.

“Vitamins” for your teeth

Made from milk.
Perfect for teeth.

Enjoy stronger teeth and better oral health!

Just like your body, your teeth need conditioning to stay healthy and look their best. Teeth can weaken and lose nutrients and can be at greater risk of developing cavities. With the ability to revitalize teeth by fortifying them with calcium and phosphate minerals, using GC Tooth Mousse or Tooth Mousse Plus is like using “vitamins” for your teeth.

If the answer is “YES” to any of the following

Do you drink softdrinks
or alcoholic beverages?

Do you undergo teeth
whitening treatment?

Do you have
sensitive teeth?

Do you suffer
from dry mouth?

Are you under
medication?

Do you wear braces?

Are you a mum-to-be?

GC Tooth Mousse (Plus) is for you!

For Maintenance

Over time, teeth can lose minerals and decrease strength due to **frequent consumption of highly acidic food or drinks, whitening procedures** and the **natural ageing process**. Regular use of Tooth Mousse will help to **reverse the process** and **maintain a healthy oral environment**.

For Orthodontic Patients

Braces make it harder to clean the teeth thoroughly increasing plaque retention on the tooth. Regular application of GC Tooth Mousse Plus offers additional **protection to the teeth and prevention of white spots** thus strengthening teeth while straightening.

For Sensitive Teeth

Sensitivity comes from exposed dentin or root surfaces of the teeth. GC Tooth Mousse exerts a rapid desensitizing effect by the **deposition of calcium and phosphate within the exposed area**. Eating ice cream is no longer a problem!

For Children

Daily use of GC Tooth Mousse can **decrease the risk of decay of erupting molars** by protecting it from oral acid challenges whilst the tooth continues to erupt resulting in healthier teeth as the child grows.

For Elderly Patients

Dry mouth linking to the medical condition and medications taken by elderly patients make them prone to caries. Gingival recession is also a natural occurrence as people age increasing the risk of caries susceptibility. By **increasing calcium in saliva**, GC Tooth Mousse can reduce the risk and drive remineralisation.

For Pregnant Women

GC Tooth Mousse can **arrest dental erosions caused by acid reflux** when mums-to-be suffer from morning sickness by maintaining the high level of calcium and phosphate in the saliva.

Clinically proven to be effective!

BEFORE
Immediately after orthodontic bracket removal

AFTER
Three months after daily treatment of GC Tooth Mousse, the lesions are less noticeable and appearance improved

Dr. H. Hayashi

BEFORE
Pre-treatment photo showing mild fluorosis with opacities

AFTER
After four weeks of nightly application of GC Tooth Mousse, the enamel shows normal optical appearance

Prof. Laurie Walsh

So easy to use!

1

Squeeze a small amount of GC Tooth Mousse onto your finger.

2

Apply on to your teeth and use your tongue to spread evenly around all teeth.

3

For maximum benefit, leave on the teeth for as long as possible or at minimum of 3 minutes.

At the end of the application, you can expectorate, rinse or swallow the remainder. Do not eat or drink for the next 30 minutes.
